Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 August 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herbert (U.S. 5,445,215) in view of Wu (U.S. 6,575,231).

Herbert discloses a fan assembly with heat sink comprising;

- a venturi-fan and heat sinking means, and a motor means for rotating the venturi fan relative to the heat sinking means;
- the venturi-fan comprising a plurality of venturis (77) that rotate around the heat sinking means proximate to the active heat dissipating surface of the heat sinking means;
- the active heat-dissipating surface of the heat sinking means is exposed to air in a central portion of the venturi where the air is accelerated to remove heat from the heat sinking means.

Herbert's invention fails to disclose the heat sinking means having an active heat surface proximate to the venturi-fan; the venturi-fan and the heat sinking means are cylindrical; the venturi-fan and the heat sinking means are flat; and the plurality of venturis of the venturi-fan are open.

Art Unit: 3743

3. However, Wu teaches the use of the heat sinking means (211) having an active heat surface proximate to the venturi-fan (1); the venturi-fan and the heat sinking means are cylindrical; the venturi-fan and the heat sinking means are flat.

Given the teachings of Wu, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the fan assembly with heat sink of Herbert with the heat sinking means having an active heat surface proximate to the venturi-fan; the venturi-fan and the heat sinking means are cylindrical; the venturi-fan and the heat sinking means are flat; and the plurality of venturis of the venturi-fan are open.

Doing so would provide an efficient and improved heat dissipating apparatus.

Allowable Subject Matter

4. Claims 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references cited on the USPTO 892 discloses related limitations of the applicant's claimed and disclosed invention.
